

ARC SE Current Value Report - QA Report

Automated QA checks the requested filenames, report page count, required chapters, required valuation-range table, comparison coverage, source-map coverage, final verdict, and density-audit availability.

Check	Result
Main report exists	True
Source map exists	True
Report page count	12
Target length 12-20 pages	True
Required chapters 1-7 present	True
Required value ranges present	True
All requested company comparisons present	True
Company source rows present in source map	True
Local source rows present in source map	True
Forbidden exact phrases absent	True
Final verdict present	True
Density audit available	False
Density weak page count	None
Text-density min chars/page	1753
Text-density avg chars/page	2421.7
Text-density pages under 1200 chars	[]
Automated QA pass	True

QA interpretation

Automated QA pass: True. The report is standalone, source-mapped, within the requested page range, and states the final current strategic asset valuation verdict directly.

Manual review notes

The document was constructed as a new standalone PDF. No existing source PDFs were modified. The report intentionally compresses prior source-book conclusions and avoids rewriting the source books.

The comparison section includes market cap or valuation status, date checked, and source used for Datadog, Palantir, Bloomberg, Celonis, Splunk, Dynatrace, Scale AI, QuantConnect, NinjaTrader, and TradeStation.

The final verdict uses current strategic asset value only. Future product, customer, or recurring-revenue scenarios are not used to set the verdict range.

Raster render unavailable in this runtime: Node canvas native binding is missing and Poppler/pdftinfo is not installed.
