Claim Trace

Report claim	Source basis	Boundary
ARC SE exists today as a current strategic asset.	All local source PDFs; Appendix A; Master Book; source maps.	Current asset framing only; no future business model valuation.
ARC SE solves operational-truth, replay, evidence, reconstruction, parity, continuity, archaeology, and intelligence accumulation problems.	Founder Story, Evolution, May15, Ecosystem, Appendix A, RapidQuant.	Problem-solution language describes current methods, not market adoption.
Comparable markets value truth and intelligence systems.	Datadog, Palantir, Bloomberg, Celonis, Splunk, Dynatrace, Scale AI, QuantConnect, NinjaTrader, TradeStation sources.	Category evidence only; no peer-value transfer.
The strongest current range is \$2.5M-\$5M.	Valuation Thesis, Strategic Acquisition Thesis, Investment Memo, Appendix A, current comparison evidence.	Internal strategic valuation conclusion; higher ranges need independent diligence.
Replacement difficulty is the central driver.	RapidQuant lineage, May15 resurrection, replay/parity evidence, ecosystem dossier, documentation corpus.	Replacement difficulty does not equal guaranteed buyer demand.

Source discipline conclusion

The current-value report extracts conclusions from the existing ARC SE corpus. It does not rewrite the prior books, does not modify them, and does not use public-company valuations to price ARC SE directly.
