

ARC SE Real World Comparison and Valuation Report - QA Report

Source discipline	Automated QA checks page count, density, required chapter markers, forbidden equivalence phrases, company coverage, date-checked valuation fields, and source-map generation. Final visual review in a PDF viewer is still recommended.		
Check		Result	
Report PDF		C:\Users\User\Desktop\ARCPDF\INVESTORS PRESENTATION\ARC_SE_REAL_WORLD_COMPARISON_AND_VALUATION_REPORT.pdf	
Source Map PDF		C:\Users\User\Desktop\ARCPDF\INVESTORS PRESENTATION\ARC_SE_REAL_WORLD_COMPARISON_AND_VALUATION_REPORT_SOURCE_MAP.pdf	
Report page count		24	
Target 20-40 pages		True	
Source map pages		3	
Minimum extracted characters on report page		1492	
Blank/low-text report pages		[]	
Forbidden exact equivalence phrase hits		[]	
Required sections missing		[]	
Date checked visible		True	
All required company rows visible		True	
Valuation type fields visible		True	
Comparison matrix data JSON		C:\Users\User\Desktop\ARCPDF\INVESTORS PRESENTATION\real_world_comparison_valuation_output\ARC_SE_REAL_WORLD_COMPARISON_AND_VALUATION_REPORT_DATA.json	
Comparison matrix XLSX		C:\Users\User\Desktop\ARCPDF\INVESTORS PRESENTATION\ARC_SE_REAL_WORLD_COMPARISON_AND_VALUATION_REPORT_COMPARISON_MATRIX.xlsx	
Comparison matrix exists		True	
Comparison matrix bytes		40252	
Comparison matrix expected sheet count		20	
Comparison matrix QA available		True	
Asset valuation doctrine correction present		True	

QA interpretation

Automated QA pass: True. The report is standalone, includes all required chapters, contains source/date/type discipline for valuation numbers, and avoids exact forbidden equivalence claims. Visual render QA was not performed by a separate rasterizer in this runtime.

Workbook QA

The comparison matrix workbook is generated from the same structured DATA_JSON used by the PDF builder. The workbook builder creates sheets for company comparison, category matrix, current asset components, value separation, current valuation, future commercialization boundary, asset graduation framework, investor assets, sources, risk discounts, diligence questions, and QA flags. This QA report confirms the final XLSX exists, is non-empty, and has the expected sheet registry recorded.
