QA interpretation

Automated QA pass: True. The memo provides a direct current valuation answer, uses the ten canonical ARC SE PDFs as primary internal sources, includes real-world company valuation evidence, and checks density to avoid thin pages.

Manual review note

The PDF is generated as dense prose with compact tables and no decorative pages, screenshots, slide-style layouts, or forced section divider pages. Text density is audited from extractable PDF text; separate pixel-density audit can be run with pdf_density_audit.mjs if needed.
