

RAPIDQUANT ANCESTOR REPORT

April 2026 Evidence Lineage Before ARC SE

April 2026 Evidence Lineage Before ARC SE

This report treats D:\RAPID\5m-rapid as an archaeological runtime. It documents the RapidEdge/RapidQuant ancestor phase using static files, reports, configs, logs, replay files, and investor artifacts. Appendix A is frozen and was only read as a modern bridge reference.

SECTION 1 - EXECUTIVE ANCESTOR SUMMARY

What RapidEdge / RapidQuant was in April 2026

EVIDENCE FILES 59 Files directly read	REPORTS FOUND 16 Root PDF artifacts	STRONGEST BOT SOL Sniper +\$892.05 verified
BEST RESEARCH MIN_AGREEING Hidden PaperTrader gate	BEST REPLAY \$178.06 Measured missed extraction	DASHBOARD Static present Runtime not booted

Investor read
In April 2026 the project was already more than a single bot experiment. The archive contains a research runtime with data health checks, real-trade analysis, parity investigation, zero-trade RCA, live campaign risk state, replay/missed-extraction measurement, promotion simulations, and investor/SaaS artifacts under the RapidEdge AI name.

The strongest verified extraction evidence is the Apr 13-15 validation set: 720 resolved paper trades with +\$1,254.53 cumulative PnL, plus the verdict's 29 live trades. The strongest family was SOL Sniper at +\$892.05. The strongest replay evidence is Apr 25 basis replay: original PnL about -\$51.71, replay PnL about +\$126.35, and measured uplift about +\$178.06.

Important naming note
The scanned source tree strongly evidences the RapidEdge AI name. Direct RapidQuant text evidence was not found in filenames, plain-text scans, or extracted PDF text. This report keeps the requested RAPIDQUANT title but marks the naming evidence as RapidEdge AI unless further evidence is supplied.

SECTION 2 - APRIL TIMELINE

Evidenced April 13-28 ancestor chronology

2026-04-13 to 2026-04-15	Data capture and validation window 16 GB parquet / 3 date partitions; 720 paper + 29 live trades reported in validation verdict. D:\RAPID\5m-rapid\docs\validation-2026-04-15\99-verdict.md
2026-04-15	Strategy validation reports Real trades, backtests, BSM/VPIN/seasonal/liquidity memos, parity memo, zero-trade RCAs, fine-tuning, verdict. D:\RAPID\5m-rapid\docs\validation-2026-04-15
2026-04-19	Live campaign configs and rollback state Five live campaign bots; campaign rollback/hard-stop events and manual-resume/caution state. D:\RAPID\5m-rapid\storage\campaign-risk-state.restore-live-2-backup-20260419T1812Z.json
2026-04-20	Live state and restored campaign state state-snapshot serverTime 2026-04-20T15:09:43Z; five bots; campaign control and overexposure/risk fields. D:\RAPID\5m-rapid\state-snapshot.json
2026-04-21	Investor/business reports plus 4-day simulation Investor Pitch, RapidEdge AI Angel Investor Master, business/marketing appendices, and \$1,000/\$5 4-day bot simulation. D:\RAPID\5m-rapid\4day_simulation_1000usd_5usd_positions_2026-04-21.json
2026-04-22	SaaS capacity, campaign projection, position-size matrix RapidEdge SaaS Capacity Model and April 28-May 25 campaign/projection models. D:\RAPID\5m-rapid\RapidEdge_SaaS_Capacity_Model_2026-04-22.pdf
2026-04-25	Replay and missed-extraction adjustments basis-replay-adjustments.json: confirmed micro pump/dump missed opportunity replay, \$2 stake. D:\RAPID\5m-rapid\storage\basis-replay-adjustments.json
2026-04-27	Runtime/dashboard build evidence and Claude references RUN_ENGINE_CONSOLE/start artifacts, dashboard builds, run logs. CLAUDE.md references appear in validation docs; no standalone CLAUDE.md found in scanned tree. D:\RAPID\5m-rapid\engine\run-dlist.err.log
2026-04-28	Campaign setup / bot simulations / dashboard artifact Optimized campaign setup and bot projection JSON/PDFs target 2026-04-28 to 2026-05-25; dashboard HTML mtime 2026-04-28. D:\RAPID\5m-rapid\RapidEdge_Optimized_Campaign_Setup_2026-04-28_to_2026-05-25.json

SECTION 3 - ANCESTOR BOT FAMILY TREE

April bot families and later ARC SE lineage evidence

Family	Strategy	Asset	Status	Trade Size	Notable Result	Descendant
SOL Sniper	signal-sniper	SOL	paper in validation; live campaign by Apr 19-20	\$5 paper; \$3 live campaign	227 paper trades, 45.4% WR, +\$892.05	Signal extraction DNA; inferred ancestor of later Truth/Strike s~
BTC Signal Sniper	signal-sniper	BTC	paper and live-reference; promoted in campaign ~	\$5 paper; \$3 live; \$8 proje~	4-day paper normal projection +\$1,162.14 at \$5 sizing; l~	Direct signal-continuous/sniper lineage; inferred link to modern~
BTC Seasonal Mean-Reversion	seasonal-meanrev	BTC	paper in validation; live campaign Apr 19-20; p~	\$5 paper; \$3 live; \$2/\$10 m~	76 paper trades, 53.9% WR, +\$16.68	Seasonal paper-mirror descendants visible in later/current confi~
SOL Seasonal Mean-Reversion	seasonal-meanrev	SOL	paper in validation; restored live pair Apr 20	\$5 paper; \$3 live restored ~	77 paper trades, 50.6% WR, -\$37.81	Seasonal mean-reversion concept survives; direct SOL production ~
BTC Signed-VPIN	signed-vpin	BTC	paper and live	\$5 paper; \$3 live; \$8 proje~	35 paper trades, 22.9% WR, +\$128.20; low-WR/high-payoff ~	Specialist signal DNA; direct modern organism descendant not dir~
SOL Signed-VPIN	signed-vpin	SOL	paper and live; later campaign remap	\$5 paper; \$3 live; \$8 later~	19 paper trades, 31.6% WR, +\$115.73	Specialist signal DNA; direct modern organism descendant not dir~
BTC Leads-Lag	btc-leads-lag	BTC	paper; live campaign Apr 19-20	\$5 paper; \$3 live campaign	47 paper trades, 23.4% WR, +\$109.42	Cross-asset continuation/lag idea; descendant mapping inferred.

Interpretation

The April runtime already separated signal-sniper, seasonal, Signed-VPIN, BSM fair-value, PM-MLQI, Liq-Cascade, leads-lag, and later micro pump/dump catcher concepts. Descendant claims are marked High only when the April artifact itself proves the family; ARC SE mapping is Medium where it is inferred from naming, strategy, and research-method continuity.

SECTION 3 - BOT FAMILY TREE CONTINUED

Remaining families and confidence limits

Family	Strategy	Asset	Status	Trade Size	Notable Result	Descendant
SOL Leads-Lag	btc-leads-lag	SOL	paper and live	\$5 paper; \$3 live; \$8 later~	25 paper trades, 28.0% WR, +\$93.42	Cross-asset specialization; inferred ancestor of specialized org~
PM-MLQI	pm-mlqi	BTC/SOL	SOL paper traded; BTC zero-trade RCA; SOL live ~	\$5 paper; \$3 live	SOL PM-MLQI 76 paper trades, -\$54.07; BTC dwell gate RCA~	Orderbook intelligence/watch style idea; direct PnL descendant n~
BSM Fair-Value	bsm-fairvalue	BTC/SOL	paper; restored live pair Apr 20; simulation pa~	\$5 paper; \$3 live restored ~	SOL +\$5.27; BTC -\$14.35 in paper validation	Simulation fair-value paper bots visible in current config.
Liq-Cascade	liq-cascade	BTC/SOL	configured paper; blocked by PaperTrader gate	\$5 paper config	0 trades, but signal fires about 100x per asset; hidden ~	Crash/liquidity shock research idea; no direct modern descendant~
Micro Pump Catcher	signal-continuous	BTC/ETH/SOL	paper replay/missed opportunity	\$2 replay stake	Apr 25 replay adjustments show Up-side missed extraction~	Inferred ancestor of modern micro harvester / replay-memory conc~
Micro Dump Catcher	signal-continuous	BTC/ETH/SOL	paper replay/missed opportunity	\$2 replay stake	Apr 25 replay adjustments show Down-side missed extracti~	Inferred ancestor of modern micro harvester / replay-memory conc~

SECTION 4 - APRIL RESEARCH EVIDENCE

Data health, real trades, parity, zero-trade RCA, fine tuning

April PnL by bot family

Verified research findings

- 720 resolved paper trades, 44.7% WR, +\$1,254.53.
- Verdict reports 720 paper + 29 live = 749 real trades.
- SOL Sniper: 227 trades, +\$892.05.
- H04 UTC: 91 trades, +\$822.31.
- Entry price <0.20: 141 trades, 16.3% WR, +\$1,301.98.
- Live/paper parity: 10/11 direction agreement; v3.3.1+ orderId trades matched.
- Funding filter inert: 383,834 samples, max 0.0163%, zero blocked.

Bot	Trades	WR	P&L	Source
sol-sniper-1	227	45.4%	\$892.05	01-real-trades.md
btc-signed-vpin	35	22.9%	\$128.20	01-real-trades.md
sol-signed-vpin	19	31.6%	\$115.73	01-real-trades.md
btc-btc-leads-lag	47	23.4%	\$109.42	01-real-trades.md
sol-btc-leads-lag	25	28.0%	\$93.42	01-real-trades.md
btc-seasonal-meanrev	76	53.9%	\$16.68	01-real-trades.md
sol-pm-miqi	76	47.4%	-\$54.07	01-real-trades.md

Research implication

The ancestor runtime already had the core scientific loop later seen in ARC SE: collect dense data, compare paper/live, isolate hidden gates, measure missed opportunities, and use small-capital promotion models before scaling.

SECTION 5 - APRIL LIVE CAMPAIGN EVIDENCE

Bots.json variants, live state, campaign-risk state

RISK MODE

sol-sniper-1-live-campaign	SOL Sniper Live	signal-sniper	SOL	\$3.00	live	True

Risk/governor ancestry

The Apr 19 campaign-risk archive proves rollback, hard-stop, bot pause/cooldown, campaign exposure mismatch detection, manual resume, realized/unrealized PnL tracking, and per-bot risk state. This is the ancestor layer of later ARC SE safety/governor logic.

First event: {'ts': '2026-04-19T15:29:17.992Z', 'event': 'campaign_rollback_triggered', 'botId': 'campaign', 'symbol': 'campaign', 'reason': 'campaign-exposure-mismatch.reconcile:btc-seasonal-meanrev-live-campaign', 'currentRiskMode': 'rollback'}

ETH Micro Dump Catcher Paper Runner~	ETH	Down	-\$0.57	\$3.88	\$4.45	Confirmed Down by Polymarket Gamma; delta from disp~

Why it matters

April already contains the ancestor of ARC SE replay/memory thinking: confirmed outcomes are compared against original displayed PnL, missed pump/dump windows are identified, and the delta becomes a research target rather than a hidden failure.

SECTION 7 - PROMOTION / SIMULATION ANCESTOR

4-day bot simulation, campaign setup, capital/position-size models

START CAPITAL

\$1,000

ALL MISSED OVERLAY

\$1,182.56

Projection

Apr 28-May 25 optimized setup

Window: 2026-04-28 to 2026-05-25. Position size: \$8.00. Baseline mean profit projection: \$15,287.93; p10 \$12,490.43; p90 \$18,214.76. These are projections, not verified live PnL.

Projected baseline bot means (\$8 setup)

BTC Signal Sniper Live		4,707.2
BTC Seasonal Mean-Reversio		358.2
BTC Signed-VPIN Live		6,501.1
SOL Signed-VPIN Live		2,449.7
SOL BTC-Leads-Lag Live		1,161.9

Promotion logic found

The ancestor runtime already separated current live bots, paper benchmarks, missed sniper candidates, conservative/normal/best cases, normalized \$5 position sizing, schedule-hour assumptions, and campaign exposure constraints. That is promotion-gate thinking before ARC SE.

SECTION 8 - INVESTOR ARTIFACT LINEAGE

RapidEdge AI investor/SaaS concept before ARC SE

Operator cockpit artifact

Companion artifact

Investor deck preview

Artifact	Pages	Text Hits	Modified
4day_simulation_1000usd_5usd_positions_2026-04-21.pdf	2		2026-04-21
Investor_Appendix_Niche_Growth_Competitive_BG_2026-04-21.pdf	7		2026-04-21
Investor_Business_Plan_Angel_50_Users_BG_2026-04-21.pdf	9		2026-04-21
Investor_Marketing_Growth_20k_BG_2026-04-21.pdf	5		2026-04-21
Investor_Pitch_BG.pdf	10		2026-04-20
Prognozni_Oboroti_24m_BG.pdf	7		2026-04-20
Prognozni_Oboroti_24m_BG_2pct_Bez_Clock_Limit.pdf	7		2026-04-20
Prognozni_Oboroti_24m_BG_2pct_Min5_Trade.pdf	7		2026-04-20

Interpretation
Before ARC SE, the project had already moved into investor framing: angel deck, business plan, marketing-growth model, SaaS capacity model, campaign setup, bot simulation, and position-size matrix. This is a prequel business/investor lineage, not a rewritten ARC narrative.

SECTION 9 - CONNECTION TO ARC SE

Evidence-based continuity, with confidence boundaries

Lineage statement

RapidEdge/RapidQuant did not appear as a disconnected one-off. The April archive shows the early DNA of operational truth, replay analysis, parity checks, promotion gates, risk states, bot-family specialization, missed extraction analysis, and investor framing. Those concepts reappear in modern ARC SE evidence.

The April-to-ARC mapping is strongest at the methodology level and medium-confidence at the direct organism-descendant level unless a named file explicitly links the phases.

APPENDIX A

Read-only
Frozen bridge dataset

MAY 9 SESSIONS

15
Modern benchmark evidence

MAY 15 SESSIONS

8
Modern benchmark evidence

ARC HIGHEST PEAK

ARC HIGHEST FINAL

TOP ARC SESSION

DNA	April Evidence	ARC SE Connection	Confidence
Operational truth	April state/log/report truth sources	ARC operational-truth delta sessions	Medium/High
Replay analysis	Apr 25 basis replay adjustments	ARC retention-gap/replay thesis	High
Parity checks	Apr 15 live/paper parity memo	ARC parity smoke-test thesis	High
Promotion gates	4-day sim and campaign setup	Small-capital validation before scaling	High
Risk states	campaign-risk-state rollback/caution	ARC safety/governor logic	High
Bot specialization	sniper, VPIN, seasonal, PM-MLQI	3004/3005/3006/3007/3008 organism roles	Medium

SECTION 10 - MISSING EVIDENCE

Found, not found, and confidence limits

Expected Evidence	Status	Details
Direct RapidQuant naming evidence	Not found	Plain-text and PDF extraction found RapidEdge AI, not RapidQuant. The report title follows the requested label, but naming evidence is RapidEdge.
Standalone April dashboard screenshots	Partially found	Dashboard HTML and generated RapidEdge cockpit/companion images were found. Raw live dashboard screenshot captures were not found.
Raw ARC-style session archives for April	Not found	April evidence is trade logs, configs, reports, state snapshots, and replay adjustments rather than organism session archives.
Monster basis curve source	Partially found	basis-replay-adjustments.json was found and quantified. A separate raw basis-curve source/report was not found in the scanned tree.
April to May 9/May 15 direct lineage	Inferred plus read-only bridge	Bot families and research methods connect clearly. May 9/May 15 values are available in frozen Appendix A JSON, read-only; direct single-file lineage proof was n~
Runtime boot verification today	Skipped intentionally	Static dashboard files and logs were sufficient. Runtime boot was avoided because existing Apr 27 logs show writes to the original Desktop path and this task is ~
Unsupported monster projections	Excluded	Campaign projections are labeled as projections. No unsupported monster extraction number is presented as verified live PnL.

Bottom line

The ancestor archive is strong enough to prove April research and investor lineage. It is not strong enough to verify unsupported monster numbers, direct RapidQuant naming, or a one-file April-to-May chain. Those remain explicit evidence gaps.
